

An Open Software Development-based Ecosystem of R Packages for Mass Spectrometry Data Analysis

Laurent Gatto¹, Sebastian Gibb², Johannes Rainer³

¹Computational Biology and Bioinformatics, de Duve Institute, UCLouvain, Belgium. ²Anesthesiology and Intensive Care Medicine, University Hospital Greifswald, Germany, ³Institute for Biomedicine, Eurac Research, Italy.

In a nutshell

- Powerful and flexible infrastructure for efficient analysis of large-scale MS-based proteomics and metabolomics data.
- Open collaborative development of software for MS data analysis:
 - Well documented and thoroughly tested
 - Long-term support and maintenance
- Modular package ecosystem to allow creation of custom analysis workflows
- Tightly integrated into Bioconductor

Outlook

- Continue integration of R/Bioconductor packages and external software
- Emphasis on seamless integration to improve user experience
- Open for contributions from the community -> reach out via Github issue or email
- Shared infrastructure and development with the metabolomics community within R for Mass Spectrometry initiative
